

MSP - HPU

HYBRID POWER UNIT

Make your Solar work for you and Self consume your power - reducing energy bills!

Life in the post feed-in tariff world....

With the FITS payment Scheme coming to an end it does not mean the end to solar. Its a fact that we buy our electricity for for a much higher price then what we sell it direct to the energy companies so why not store yor power and self consume. This is increasingly becoming a much more feasbale way of getting the most out of your renewable energy systems.

MSP Technolgies have designed the Hybrid Power Unit (HPU) an all in one Hybrid Solar/storage system. Within its versatile and long lasting GRP modular housing are some of the best performing Lithium energy storage modules on the market our Hybrid inverter systems allowing our system to fit almost any Solar array. This means you can have a fully automated storage system for your solar array delivered to sight in a plug and play format.

The HPU works with Lithium Ion, LTO and Saltwater Energy storage modules and is designed so we can easily incorpate our low power and high power inverter systems within the housing. This gives a incredibaly wide power range from a single unit HPU and as it modular it can easily reach MW levels if required.

Produce, Store, Consume

World Class Power Density

Modular housing can be easily sized

Designed for quick & easy installtion
